

UNDERGRADUATE RESEARCH OPPORTUNITY

Baker Lab, Rosenstiel School of Marine and Atmospheric Science

We are currently looking for 1-3 undergraduate students to work on numerous projects, focusing on genetic analysis of coral samples collected from all over the world. The student will gain experience with DNA extraction, PCR and other genetic techniques. In addition, help may be required at the coral hatchery we manage.

Students are expected to work 10-15 hours per week starting as soon as possible. No previous experience is necessary. The student should be constant, communicative and dedicated to learning.

The work done in this lab is applicable to many different forms of science, from the medical to marine biology tracks. It is a wonderful opportunity to see the micro-scale of science, and to be involved with a dynamic lab. Opportunities for publication and individual study are possible.
